

How to Install new Fonts on Mac

1. Turn off all applications

Microsoft Word, Powerpoint, Photoshop, Illustrator... everything you are opening, turn it off. Because, when you reopen, the new fonts can be installed and available to use on these applications. It may not appear in your software from font menus if the program is opening during font installation.

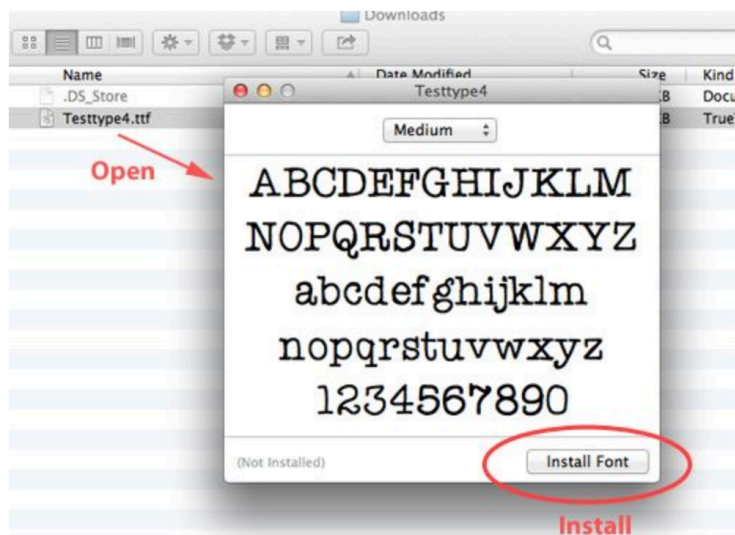

2. Download fonts and locate the font folder

The first, you need to download the font style from the website (Such as: [Dafont.com](#), [Fontfabric.com](#)...). Then, launch the folder where it's located. Generally, the font sets are downloaded as .zip or .rar files, therefore, you may need to unzip all of them. They are going to either be with format: *TrueType* (.tff), *OpenType* (.otf), or *PostScript Type 1* (.ps1)...

3. How to install font on Mac

Double Click on the font to install

Clicking on the font file which you want to install on your Mac, then application should automatically open. You can discover a dialog box with a preview of the font. Just click on "*Install Font*" button to install the font.

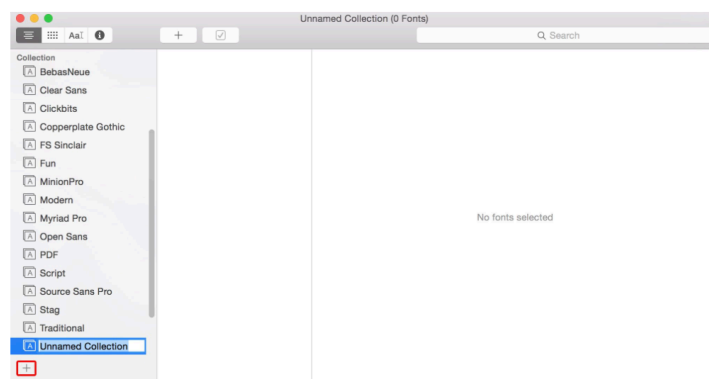

Drag and drop the files font to suitable Folder.

If you've downloaded a font with different type (bold, italic, extra bold, etc.), then make sure to get all the files. Pick fonts you need, and drop it inside the *Font Book* interface. You can be accessed it within the Applications folder, or quickly type "Font Book" into Spotlight to find it.

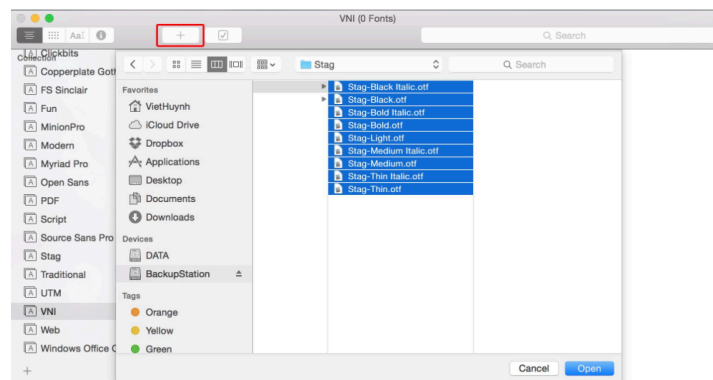

Find the Font Book via Applications

Click on + and set id for new Font Folder

Continue click on + and add all files fonts of Folder which you've recent downloaded and unzipped. Or you can Drag and Drop the font into here.

4. Reopen your applications

The new fonts should be applied and available to go! For example, if you have Word open and you've just installed a new font on Mac, you can quickly go back into Word and select the new font.
